Thermo Scientific

Did you know…

- One piece of bone = millions of dollars in lost sales and years of brand damage;
- One tiny, 2-mm metal piece = average of $8 million in recall and rework expenses;
- One gram of overfill = more than $100,000 of lost profit per year
- Savings earned by installing an in-line analyzer will pay for the instrument within 6 months

Those are four great reasons to invest in Thermo Scientific Product Inspection and Processing equipment. Our checkweighers, metal detectors, x-ray inspection systems and online analyzers help to protect your brands by ensuring the quality, accuracy, efficiency and safety of your products. With 65 years of making sure little things don't turn into big problems, we know that little things can make a big difference in your bottom line, and often keep you up at night.

Thermo Scientific ε scan™ In-line Analyzer

When you need to "see what's inside the pipe," Thermo Scientific ε scan™ in-line analyzer measures fat, moisture and protein in pumped food products, ensuring product quality to customer's standards and saving on raw material costs, as well and saving time, money and energy.

Thermo Scientific X-ray Inspection Systems

Around the world, Thermo Scientific X-ray inspection systems provide complete protection from metal, glass, stone and other dense foreign objects. Our x-ray systems inspect packaged, bulk or piped product.

Thermo Scientific Checkweighers

To ensure the accuracy for your weighing applications, Thermo Scientific checkweighers combine the latest in weighing technology with a variety of weighframes that include general purpose to more demanding, high-rate and high-accuracy systems.

Thermo Scientific Metal Detection Systems

For protection against metal contaminants, Thermo Scientific metal detection systems provide a high level of performance, ease of use and reliability--typically achieving up to 20% better sensitivity than competitive units. And to ensure you get the right system for your application, we offer hundreds of standard head styles plus custom apertures and systems.

Thermo Scientific Product Assurance Services & Solutions (PASS)

The Thermo Scientific PASS program provides you with a fast, confidential way to have your product thoroughly tested and inspected when you suspect contamination or nonconformity. Using state-of-the-art

Thermo Scientific X-ray and metal detection systems, our staff is experienced at detecting ferrous, non-ferrous and stainless steel metals, glass, stone, bone, PVC based plastics and rubber—plus a number of other dense contaminants.
