

A&B Process Systems

A&B has been engineering, automating, fabricating and installing stainless steel process systems for the dairy industry throughout the U.S. for over four decades. In fact, our Wisconsin-based company grew up serving the dairy industry, and we're still located in the heart of America's Dairyland. Through the years, we have built strong reputations with many of America's leading dairy product companies as well as hundreds of smaller cheese factories and entrepreneurs eager to earn those first blue ribbons for premium dairy products.

Our knowledgeable team of process, automation, and mechanical engineers, certified welders and project managers understands the unique challenges you face in the dairy industry. We will work closely with you during every phase of your project to make sure that your new A&B process system not only complies to the extensive regulations you are subjected to—but also optimizes production, water and energy control to help you deliver the highest quality, safest and most efficiently produced dairy products possible.

Services we provide to the dairy industry include but are not limited to...

- Process Engineering
- Custom Design and Fabrication
- Automation and Controls
- Factory Acceptance Testing
- Installation
- Documentation
- Start-up and Training

We will custom design any type of process system or equipment you may need, but here are some of the **typical products and systems we provide to the dairy industry...**

- Process Modules
- Tanks and Vessels
- Standard Tanks
- Clean-In-Place Systems (CIP)
- Thermal Systems and Pasteurization

- Batching and Blending Systems
- Melt Systems
- Fluid Transfer Options
- Components and Finishing
- VacuShear® Vacuum Liquid Processing Systems
- Sanitary Piping Systems
- Jacketed Piping Systems
- Mix Tanks
- Storage Systems
- HTST and Vat Pasteurization
- HTST Balance Tanks
- HTST Hold Tubes
- Transfer/Utility Panels
- Modular Process Systems
- Water Filtration
- Water and Wastewater Management
- Cleaning Solution Regeneration Systems
- Flavor Vats

A&B Process Systems manufactures the highest quality process equipment on the market today, but a lot of companies do that. What truly sets A&B apart is the way we engage our customers, providing an experience that is not normally found in this industry. From concept to

completion, our customers get what they want and need plus they are engaged along the entire process of the project.

We have five plants in Stratford, WI with over 175,000 square feet of manufacturing capacity, serving customers all across the country and around the world.
