

SupplierCapabilities Spotlight

Schneider

Since 1998, Schneider has been creating end of line packaging solutions for the dairy industry that bring upstream dairy product "right to the truck."

This experience in the dairy industry has led to innovative design platforms and equipment specifically engineered with features and components designed for wash-down environments such as slug tubing at all points for maximum sterility from microorganisms. The open and accessible construction design allows for total access to every aspect of the machine and recent design improvements allow for an up to 30% reduction in the total number of parts. That means less mechanical failure and less parts replacement without sacrificing the proven durability Schneider is known for.

Even products with complex shapes, such as block cheeses, over or undersized jugs and tubs, can be tightly packed, minimizing packaging materials and maximizing sustainability.

From gable top or plastic jug case packing solutions, available in stainless steel heavy wash-down construction, to Schneider's high-speed Robotic Vertical Carton/Case Loader, Schneider equipment is engineered to excel in dairy packaging.
