

Supplier Capabilities Spotlight

Tetra Pak® Inc.

Tetra Pak® Processing provides solutions and services to enable our customers in the dairy, cheese-making, beverage, ice-cream, prepared food and cosmetic industries to achieve safe, cost-effective, continuous processing of quality products.

Processing Equipment

We offer a wide range of unique sanitary equipment covering all the needs of the food industry applications: pumps, valves, heat exchangers, homogenizers, high speed centrifugal separation, dosing, filtration, blending, mixing, as well as ice cream and cheese processing and packaging equipment. Our offer goes from simple components to complete turn-key projects.

Evaporation and Drying Solutions

Tetra Pak's® processing expertise includes solutions in the evaporation and drying for a variety of dairy products. Our portfolio of systems allows for flexibility in production including whey and infant formula products. We offer turn-key support from project feasibility to complete process equipment solutions through the final packaging of powder products.

Full System Supplier

We supply complete integrated processing, packaging and distribution lines, and stand-alone equipment, carefully tested to make sure they give you optimal performance.

Plant Engineering

Tetra Pak's® strength in plant engineering and project management is reflected by over 50 years of experience in designing food processing and packaging plants, by

Tetra Pak® Continuous Freezer 2000 A2

thousands of plants in operation worldwide, and by a presence in more than 120 countries. At every stage of project management, from initial evaluation to plant handover, Tetra Pak® can take complete responsibility. From factory revamping to design and installation of complete new production lines, our capabilities range from food process engineering, controls, automation, to start-up training.

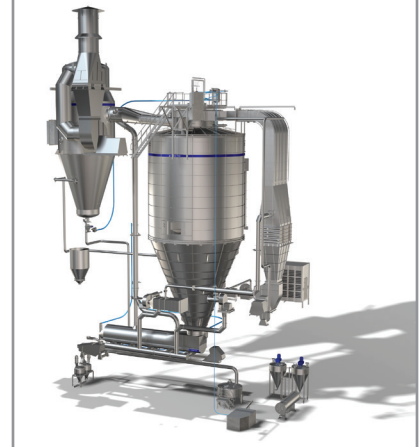

Genuine Spare Parts

As part of our product support, Tetra Pak® offers a complete line of genuine spare parts for ensured reliability, including pumps, valves, and integration components. Using genuine spare parts ensures that you will have fewer unplanned stoppages, minimum downtimes, easier ordering cycles, and less inventory to stock.

Maintenance Solutions

Our maintenance solutions help maximize the performance of your plant. We will time the delivery of your spare parts

Tetra Magna® Dryer - Wide Body

to coincide with service so that you can save on inventory costs and downtime. Tetra Pak® can also dispatch maintenance experts to be part of an annual shutdown to perform maintenance activities without interrupting day-to-day operations.

Upgrade Solutions

As a total solution provider and long-term partner, Tetra Pak® offers a wide range of customized and pre-built upgrade solutions for our complete systems, aseptic modules, and processing components including Tetra Pak® Homogenizers, Tetra Pak® Separators and the Tetra Alfast® Milk Standardization module. We address competitive market demands, food safety concerns, government regulations, and the challenges of swift technological advancement.
