

Cannon Equipment

Innovators with History

Cannon Equipment is a leading design, engineering and manufacturing organization with deep roots in the dairy heartland. While rich with the history of the dairy industry and the rapid growth it's undertaken, Cannon Equipment remains a pioneering leader in developing unique solutions for customers. "As the new President of Cannon Equipment, I'm committed to meeting the evolving needs of the dairy industry with quality equipment and service," said Chuck Gruber.

Chuck Gruber

Innovators of in-plant automated systems for a broad array of dairy products, Cannon Equipment is a single-source supplier with a near-40-year history of partnering with dairy management to increase productivity, decrease costs and drastically reduce potential for injury.

Automated Cart Loading

Cannon has pioneered a number of cart-based product distribution systems in the dairy industry with automatic cart and dolly loaders which provide comprehensive efficiencies in handling products shipped on wheels. Along with systems engineering services, the company designs and fabricates many of the pieces of equipment typically used in a material handling system. As a result, Cannon Equipment is fully committed to making the system operable, not only from a design perspective, but also from a product performance aspect.

Mooooving the Product

Cannon Equipment's expertise in transportation configurations for over-the-road and in-stock delivery include:

- Cases stacked on forkliftable pallets or wheeled dollies
- Rolling carts for transporting high-volume products, and
- Corrugated product for long-haul transport and one-way warehouse shipments.

"When it comes to automation, Cannon Equipment builds a quality cart that consistently performs beyond our expectations. The return on investment on their products is excellent as is the service. I like working with a single-source organization, because they take responsibility from beginning to end, and that's rare these days."

*Jimmy Vona
Vice President
Dairy Maid Dairy
Frederick, MD*

Cannon Equipment has developed and perfected specific component equipment and systems for:

- Receiving and washing empty cases, carts, and dollies
- Bottle, carton, and case conveyance (overhead and in-floor systems)
- Filling and packaging lines from casing to palletizing, and
- Cold storage, automated order picking and loadout.

Customers for Life

A large number of the company's dairy customers have been with Cannon Equipment for 20+ years, signifying that

Cannon Equipment listens to customers and has the engineering, manufacturing and service skills that buyers rely on to build and maintain highly-efficient systems. Reduction of labor costs as well as reduction in potential injuries is a powerful combination to beat, and Cannon Equipment delivers both with fully-automated delivery systems designed to streamline material handling.

Choose a completely integrated system or a stand-alone unit and Cannon Equipment's team of dairy plant integration experts will design and produce exactly to your specs ... and in many cases contribute improvements to your planning process.
