

Tygard Machine & Manufacturing

Since 1972, Tygard Machine & Manufacturing Company Inc. has been servicing the material handling industry. Located in Washington, PA, Tygard Machine & Manufacturing is family owned and operated.

In 1992 Tygard Machine & Manufacturing developed the patented Tygard Claw four-way layer-lifting and pallet-splitting attachment. Due to the successful response from industry leaders and the immediate positive results in customers' profits, Tygard Machine & Manufacturing dedicated all of its resources to refining and fabricating the most successful layer-picking attachment in the material handling industry.

The Tygard Claw is an ergonomically sound and speed efficient solution that has redesigned the supply chain of many of the world's leading distribution companies in the beverage and grocery

industries. The Tygard Claw modernizes a warehouse with minimal investment of time and capital. Designed for functionality and durability, the Tygard Claw reduces manual labor and maximizes productivity.

While an average laborer can stack an average 150-180 cases per hour, a Tygard Claw operator and product feeder can layer pick from 1,500 to more than 2,000 per hour. The Tygard Claw can increase order handling capacity, energy efficiency and space utilization while maximizing the health and safety of the employees.

It does what no other layer picking attachment has been able to do. Tygard Machine & Manufacturing and the Tygard Claw have successfully met and adapted to meet the challenges of the material handling industry all while maintaining the highest level of customer satisfaction and support.

TYGARD CLAW

The One That Works

What is Layer Picking?

An ERGONOMIC solution that safely & securely transfers product in single & multiple layers from one pallet to another.

Applications include: Order fulfillment, specializing in bulk delivery. Creation of mixed pallets & pallet transfer. Conveyor feeding. Breakdown of damaged pallets. Breakdown of incoming product for receiving.

Increase pick rates from 200 cases per hour manually to over 2,000 cases per hour with The TYGARD CLAW.

An investment that provides a wide array of benefits, including major savings through reductions in manual labor, seasonal employment, overtime, warehouse injuries & overall insurance costs.

The industry leader with over 15 years of proven results.

Layer Picking is the TYGARD CLAW.

Products & Features Include:

- The high performance Tygard Claw Side Mounted Systems.
- The versatile quick disconnect Front Mounted Tygard Claw.
- Tygard's layer pick technology easily handles product no other attachment can. Including multiple sized pallets with ranges from 32"x37" to 40" x 48".
