

URSCHEL

URSCHEL Celebrates 100 Years of Precision Food Cutting Equipment

Commemorating a century in the manufacturing of precision food cutting equipment, Urschel Laboratories, Inc. continues its worldwide reputation for excellence by working in partnership with customers to meet the ever-changing challenges in the marketplace. Increases in productivity, new products, energy-saving machinery, and cleaner, more precise cuts, are just a few ways the engineers at Urschel have – and continue – to rise to the demands of this dynamic industry.

Founded in 1910, Urschel Laboratories, Inc. is the world leader in food cutting equipment manufacturing. Urschel is not just a builder of machines. The company works with customers to develop solutions to processing problems, finding – or creating – the best Urschel machine to fit any production situation.

Precision in manufacturing means that every cutting machine is carefully designed from the engineering drawings to close tolerances on interior cutting parts. Today, Urschel Laboratories manufactures more than 40 precision-engineered size reduction machines, including a wide range of slicers and dicers for hundreds of processing applications.

While other suppliers may take weeks to deliver needed parts, Urschel Laboratories delivers parts promptly. The company realizes customer concerns of the potentially high cost of lost production time and wasted product. With Urschel Laboratories, clients don't have to wait for spares. Replacement parts for Urschel machines are shipped from an extensive multi-million dollar inventory in a matter of hours.

Urschel seeks to help customers' businesses by manufacturing machinery that performs with precision and reliability. A global network comprised of Product Test Cutting Facilities, factory-trained service staff, and knowledgeable, hands-on sales representatives work together to fully assist customers.

A recent expansion of the Urschel Product Test Cutting Facility in Valparaiso, Indiana, U.S.A. enables Urschel to meet a growing number of customer requests. Customers are welcome to view the test cutting of their product. A comprehensive report with photos and/or video can be compiled to fully assist customers in the evaluation process. A visit to Urschel is not complete without a tour of the 235,000 sq. ft. factory including Urschel's newest state-of-the-art foundry. Contact Urschel to schedule a no-charge, no-obligation test cut of your application:
