

Knowledge and Experience

In today's growing global demand and market for packaged foods, A.T.S. Engineering, Inc. has emerged as a highly recognized manufacturer of precision packaging equipment for the food industry. In the field of precision packaging, it takes a combination of skills, expertise and years of experience to provide customized solutions to meet customers' expectation. A.T.S. Engineering, Inc. knows this exceedingly well. Over the years, A.T.S. Engineering, Inc. has earned a world-wide reputation as a single-source, highly specialized equipment manufacturer that will fulfill your needs for high-speed filling, sealing and over-capping. At A.T.S. Engineering, Inc., we merge our technological expertise with an intense understanding of customers' expectation.

Diverse Product Range

A.T.S. Engineering, Inc. custom designs and manufactures high-quality precision equipment that suits a wide range of applications. Our durable rotary and straight-line machines are designed to package a variety of liquid and viscous products, including: cottage cheese, sour cream, yogurt, ricotta, ice cream, dips, margarine, cocktail sauce, honey, pesto, dough, batter, garlic and horseradish. Adaptable for either single or multiple filling operations, our affordable machines meet and/or exceed USDA, FDA and 3A standards. Our technology and machines are field-tested on the shop floor, where long-term performance really matters. The result: reliability that can be counted on for years of trouble-free operation.

Total Packaging Solutions

At A.T.S. Engineering, Inc., we do much more than simply build equipment. We are your Packaging Engineering Consultants from design, build, installation, start-up, training and follow-up. Our long history of applications experience enables us to ensure that customers receive optimum production results through every stage of production. From initial concept to completion, we consider ourselves a part of your process. We are never satisfied until you are. This is our commitment to excellence!
