

Convermex USA

Convermex: Technology, Innovation and Quality

Convermex, one of the world's largest producers of expanded polystyrene (EPS) cups and containers, delivers cutting-edge food and beverage solutions for superior performance and value. The Convermex GraphiCup is recognized throughout the industry for its exceptional insulation, superior printability and outstanding value. Now, Convermex introduces a new GraphiCup specifically for ice cream and frozen dairy.

The GraphiCup Container delivers unsurpassed insulating properties, keeping product colder longer than a paper container. Temperature holds better in processing/filling and in transport from store to home, while delivering virtually the same hardening time as paper containers. It's ideal for pre-packaged frozen desserts and also for hand-packed take-out or over-the-counter applications.

Sturdy and break-resistant, GraphiCup Containers are available in 4, 8, 16, and 32 oz sizes, and take standard paper, paper/plastic and tamper-evident lids.

While GraphiCup takes great care of the product inside, it also brilliantly showcases the product brand on the outside. In-mold lithographic printing results in outstanding colors and sharpness.

In addition to GraphiCup, Convermex manufactures a wide variety of plastic cups, containers, and lids. We have a wide variety of stock products and designs and also offer custom packaging solutions for our customers.

For over forty years, Convermex has combined innovative technology, the highest production standards, and a strategic distribution system to offer superior packaging products throughout the western hemisphere. Convermex serves

a range of channels: packer/processor, national accounts, club stores, supermarket/retail and foodservice distribution. The company has five manufacturing facilities and 18 distribution centers in Mexico and the USA, and is the leading EPS cup and container producer in Latin America.
