

Evergreen Packaging Equipment

Full line of gable top packaging machines from Evergreen Packaging

CEDAR RAPIDS, IA, USA – Evergreen Packaging manufactures a full line of filling equipment for refrigerated dairy, juice and liquid food products. Gable top packaging equipment, which forms, fills and seals paper gable top cartons, is ideal for pasteurized, ESL (Extended Shelf Life), and ELL® (Extended Long Life) applications. Individual machine models fill cartons from 4 oz. up to half-gallon (150ml up to two liter), at speeds from 30 up to 340 cartons per minute. SPOUT-PAK® twist-off closures are also available for most gable top cartons.

Many of the new models include servo driven technology which provides repeatable package performance and automatically controls fill volumes and profiles based on product and carton size. Infinite fill adjustments allow for less down time with quick and easy changes to fill volume and carton height.

With fill volumes of 6 to 32 oz (180ml to 1.15L), the EQ-70 fills quarts/liters up to 7,000 cph (117 cpm) and fractionals up to 9,000 cph (150 cpm) with a three-stage top down fill system.

ELL® (Extended Long Life) components include a self-contained CIP/SIP

system, environmental control features, carton treatment and a hermetic filling system to maintain product quality.

The N-100 serves the school milk, single serve food service and convenience store markets. With fill volumes of 4 to 16 oz (125 to 500ml), this Eco-Pak® machine fills 4 to 10 oz. (125 to 300ml) cartons up to 10,200 cph (170 cpm) and 12 to 16 oz. (350 to 500ml) up to 8,500 cph (142cpm).

The Q-70 meets market demand for a mid-speed quart/liter cross-section machine with fill volumes of 6 to 32 oz (180ml to 1.15L). This model fills quarts/liters up to 7,000 cph (117 cpm) and fractionals up to 9,000 cph (150 cpm).

To ensure that Evergreen machines keep running efficiently, Run Time™, a comprehensive parts and service program provides genuine Evergreen parts manufactured to OEM specifications to maximize production, reduce risk of product loss and protect equipment warranties. The company stocks an extensive inventory of

critical parts and offers 24/7/365 availability for emergencies. A network of fully-trained, experienced technicians is established to handle any size service request.
