

# GEA Niro Soavi

## About Us

GEA Niro Soavi is the global technology and market leader for high pressure pumps and homogenizers. Established in 1947 and part of the GEA Group – one of the leading engineering companies worldwide – GEA Niro Soavi maintains its leadership position through product innovation, reliability and local presence in order to satisfy customer expectations. Our international sales and service network allows GEA Niro Soavi to be close to customers regardless of where they are, with local, competent and professional support.

## Products

The GEA Niro Soavi homogenizer product line provides leading technology with the widest range of machines that cover all possible application needs for the dairy industry. From pilot to large-scale fully automated units, in either sanitary or aseptic execution, our homogenizers are also in compliance with 3-A standards and USDA guidelines.

The use of high efficiency homogenizing valves, like the patented NanoValve™, guarantees the most effective homogenization at the lowest pressure, not only on milk, but also on high fat content, high viscosity, recombined and high total solids products, providing customers with low operating costs.

GEA Niro Soavi operates in accordance with the ISO 9001:2000 certified Quality System, which represents the philosophy of the company in sales, after sales, engineering and production processes.

## After Sales Service

With GEA Niro Soavi as your service partner your life becomes much easier and enjoyable. We shape a service pro-

gram that matches your exact needs ensuring less downtime, better performance and improved quality - wherever you need it, whenever you need it.

The GEA Niro Soavi preventive maintenance program is conducted on site by our technical experts. Preventive maintenance can reduce your downtime and allow your plant to operate more efficiently. Often we try to schedule the preventive maintenance to coincide with your annual shutdown in order to perform major maintenance activities without interrupting your normal operations.

## Homogenizer Rental Program

The GEA Niro Soavi Rental Program enables you to rent our equipment so you may test your product at your plant. This allows you to operate the homogenizer/microsizer while putting your product's

properties through the paces. This program also gives you maximum flexibility in test scheduling, product formula variations, and confidential development work.

We provide you with a full range of test equipment that meets your specific needs. All of our rental machines come with the option to buy.

Our technical support staff is available to answer questions and provide tech support when needed.
