

TriCore, Inc.

By combining decades of dairy industry experience with unsurpassed systems integration expertise and an unequaled passion for delivering results, TriCore, Inc., is uniquely positioned to help dairy producers streamline operations, reduce costs and improve profitability. Since 1991, TriCore has partnered with the world's leading brands to successfully integrate and automate their operations – allowing them to consistently deliver the high-quality dairy products their customers have come to expect.

Product and process know-how

TriCore can design and implement automated solutions around the delivery of virtually any dairy product already in the mix, or still on the drawing board – no matter the objective.

Product experience includes milk; cheese (processed & non-processed); whey; ice cream; yogurt; creamers; toppings; cultured drinks; and soymilk. Expertise includes regulatory compliance; batching; blending; pasteurization (HTST & UHT); and aseptic processing.

"Breakthrough" approach to customer satisfaction

TriCore offers a thorough and comprehensive approach to systems integration, which is backed by its passion for quality service and a commitment to exceed customers' expectations. Its "Triple Theory Breakthrough" encompasses:

VISIBILITY: Higher visibility is delivered in the form of more intuitive, user-friendly HMI design and improved graphics to improve product quality, reduce operator error and achieve greater insight into process operations.

FLEXIBILITY: It takes the form of more innovative system software applications to significantly enhance recipe management and reduce product

loss. It means users gain the power to get the most out of their process systems.

ACCOUNTABILITY: Made possible by more thorough and comprehensive data reporting. By knowing who did what, when and where, dairy operations are assured their systems are continually operating at peak performance.

Services, innovations and peace of mind

Whether a project involves a new operation, or focuses solely on an upgrade of an existing system and infrastructure, TriCore has it covered.

Custom-engineered services include electrical engineering; network engineering; PLC programming; visualization software; business and manufacturing intelligence solutions; manufacturing execution systems; instrumentation calibration; and process startup, commissioning and training. In addition to tailored services, TriCore offers its own line of proven software innovations, including:

TCflexCLEAN: Lets users achieve maximum control of Clean-In-Place operations and start saving costs from the moment it's installed.

TCflexTRACK: Provides a window into every aspect of the manufacturing process so users can spot problems before they happen and optimize process efficiencies.

TCflexWEIGH: Squeezes more profit out of each product package, while at the same time, maintaining and documenting all weight requirements.

TCflexBATCH: Simplifies batching – and in the process – increases product quality and consistency.

Many customers also take advantage of TriCARE 24/7, TriCore's ongoing service and support contract that offers security and peace of mind.
