

A.T.S. Engineering Inc.

A History of Innovation

In the field of rigid plastic packaging, it takes a combination of skill and experience to provide tailor-made solutions for each customer's individual requirements. A.T.S. Engineering Inc. knows this well. A.T.S. had its beginnings many years ago redesigning and modifying other dairy product filling machines to run faster and more efficiently. As the number of satisfied customers grew, A.T.S. began to receive requests to build new equipment from the ground up.

Custom Design & Manufacturing

A.T.S. Engineering designs and manufactures high-quality filling, sealing and overcapping equipment that suits a wide range of applications. Our durable rotary and straight-line machines can package a variety of liquid and viscous products including juices, sauces, dips, salads, sour cream, cottage cheese, ricotta, yogurt and ice cream. Adaptable for either single or multiple filling operations, our affordable machines meet or exceed USDA, FDA and 3A standards. Since we believe long-term performance is absolutely paramount, all of our products are rigorously tested prior to being shipped to our customers' plants.

Commitment to Excellence

Over the years, we have worked hard to earn our reputation as single-source specialists in high-speed filling, sealing and overcapping machines for this demanding market. Our ability to deliver reliable machines that can be counted on for years of trouble-free operation comes from merging technical expertise with an understanding of what our customers need in their plants.

Total Packaging Solutions

At A.T.S. Engineering Inc. we do more than simply build equipment. We are your packaging machine consultants. From installation to startup and training,

we use our long history of applications experience to ensure that customers get optimum results every step of the way. Our manufacturing staff and engineers are ready to support your needs at any time with technical assistance and expertise, while our service technicians are available at a moment's notice.

Our installation goes beyond simply setting up the equipment in your plant; we are present during your initial start-up to insure your equipment is running as flawlessly as possible. All installation and training is provided by us at no extra cost with the installation of all new equipment.

From concept to completion, we consider ourselves part of the process - and are never satisfied until you are.
