

American Conveyor

American Conveyor has been designing, fabricating, installing, and servicing container handling and warehousing systems since 1993. In just a little over ten years, our innovative equipment and systems increased throughput and reduced load-out times for more than 1500 customers making American Conveyor one of North America's largest suppliers of container handling and warehousing systems.

Our modern manufacturing facility in upstate New York is staffed by seasoned veterans who pride themselves on the design and fabrication of rugged, long-lived systems that cost less to buy and less to maintain. Our in-house team is complimented by a team of experienced sales engineers equipped with on-the-go computers and the latest versions of design software that allows them to input information and collaborate with our in-house staff to design and quote equipment, systems, or entire facilities from a section of conveyor to a turn-key warehouse in hours – not days.

We design and deliver cost-effective solutions that speed product flow, improve throughput, increase storage without requiring additional space, reduce the time required for load-out and eliminate delivery errors. Our innovative designs improve sanitation, lower labor costs, and reduce the number of worker claims.

Every team at American from management to engineering and fabrication to shipping thoroughly understands the economic and logistic challenges of the dairy business. We are expert at integrating new, and refurbished or upgraded equipment into systems that functions flawlessly from the off-loading of empty cases through filling and storage to load out.

We include the cost of installation in the bid – with American there are no “hidden or open-ended charges. The price we quote is the price our customers pay. And after installation we cover the whole application including third-party equipment, not just the equipment we manufactured, with a “blanket” warranty.

We are proud of the reputation we have earned as a builder of long-lived, easy to maintain equipment. Our 24/7 customer support is unsurpassed in the industry. Every member of our customer support and service team is

100% committed to getting your order right the first time. Everyone at American buys into the idea that our job is to reduce your downtime and increase the life of your equipment. We are always prepared to answer the questions of your in-house engineering team or to provide on-site parts and service.

We routinely conduct machine audits as part of a program to forecast maintenance, increase line speeds, or reduce operating costs for our customers. Assessing the condition of equipment, locating and solving specific performance problems, measuring capacity against anticipated demands as well as identifying equipment that will need to be upgraded or replaced are often the first steps in defining the scope or budgeting for a capital project.

Our website, www.amerconveyor.com is informative and easy to navigate. Customers can place orders, ask for a quote, or request information about parts, service or equipment. Data sheets and brochures are available in a downloadable pdf format.
