

Anderson Instrument Co.

Anderson Instrument Co. designs and manufactures a broad line of sanitary process instrumentation for customers in Fluid Food & Beverage, Dairy, and the Biopharmaceutical Industries. By specifying Anderson products, customers are assured that their sanitary instrumentation will meet or exceed all requirements for performance, reliability, cleanability, and sterilization.

Anderson's roots in the dairy industry run long and deep. We offer the most comprehensive line of solutions that have been specifically developed for dairy processing applications. We work closely with the industry to stay ahead of changes and trends so our products will continue to help customers remain competitive. Whether you're considering a new aseptic system or targeting cost savings through lost product reductions, our products and services will always be the logical choice.

Dairy Pasteurization Product Line

Our ongoing commitment to providing failsafe pasteurization controls continues with our recent introduction of the revolutionary AV-9900 HTST control package. The Anderson DART remains the only proven failsafe reference thermometer for HTST, even after 8 years! And the Anderson "JD" differential pressure switch has been the de facto standard for protecting regenerators since 1983. You can count on these products to meet all health code criteria, but more importantly to insure your pasteurization process is operating safely at all times.

Find out more about our flow, level, pressure, temperature, analytical, instrumentation and pasteurization controls product lines – call 800-833-0081 and ask for extension 224 today!
