

## Delkor

For more than 30 years, Delkor has designed and manufactured forward thinking end-of-line packaging equipment. Equipment categories include; flat pad packing, tray packing, case packing, shrink bundling, robotics and tray and carton forming and closing.

The Spot-Pak® packaging system, Delkor's core product line, eliminates up to 75% of secondary packaging materials by eliminating the traditional corrugated box. It uses a combination of corrugated pads, polyethylene shrink film and a unique temporary bond adhesive to create the patented

Spot-Pak® package. To date, Delkor's North American customers have reduced their corrugated usage by approximately 7,500 truckloads per year. In addition, because the Spot-Pak® package is smaller than a corrugated tray or box, cube density is typically increased by 5% to 8%, depending upon specific product size. This greater cube density also translates to a similar reduction in freight and distribution costs and related energy usage.

Delkor recently received a US patent for the Tray-Pak® package which uses less material than a box but provides an instant display tray for SPEED-TO-SHELF. Delkor stands apart from the competition as the only equipment manufacturer that can provide a combination tray loader and flat-pad (Spot-Pak®) loader in one machine.
