

## Zero Loc

### Insulated Panel and Door Systems

Incorporated in 1969, Zero-Loc has grown to become the major producer of expanded polystyrene (EPS) insulated wall and ceiling panels in North America. Through experience and innovation, Zero-Loc has developed a system for hygienically sensitive food and beverage preparation areas.

Plant sanitation is the primary issue to our food processor customers. This has always been a major concern for that sector of our customer base, which prompted the development of the Zero-Loc Hygienic Envelope. A system of high performance building products designed to withstand the continual harsh wash downs required in maintaining a sanitary environment.

**Factory Applied fiberglass-reinforced plastic (FRP):** FRP is an essential component of the Zero-Loc hygienic envelope. Fiberglass reinforced plastic is bonded to the surface of our panels during the manufacturing stage. FRP protects panels from the frequent rigorous cleaning that is required in maintaining a sanitary environment.

**Walk-on Suspended Ceilings:** Constructed with Zero-Loc EPS insulated panels, the finished Zero-Loc walk-on suspended ceiling system is energy efficient and durable. The walk-on ceiling system allows maintenance of services above the ceiling while production continues below in a bright, sanitary and hygienic environment.
