

Neogen Corporation

Neogen Corporation is a leader in developing and marketing diagnostic test kits that provide simple food safety solutions. Its products are unsurpassed in terms of ease of use, convenience and speed.

In-house testing now available to dairy processors includes safety testing that was never known in the days when all testing was performed off-site. Current testing options include:

- Sanitation monitoring, which allows for the almost instant verification of cleanliness of food contact surfaces prior to production;
- Allergen testing kits, which allow HACCP verification of cleaning regimes with simple on-site tests that take only a few minutes;
- Rapid microbial tests, which allow for the early detection of potential spoilage organisms, and allows evaluation and release of ingredients prior to their use in production.
- Dairy antibiotic tests, which allow for detection of excess antibiotic residues in only minutes.

Neogen's products include:

Rapid microbial testing

Soleris® is a user-friendly, rapid optical testing system that accurately detects microbial contamination. The system measures microbial growth by monitoring pH and other biochemical reactions that generate a color change as microorganisms grow and metabolize. Using the Soleris system enables operators to easily identify, monitor, release products, and map problematic spots much faster than conventional methods.

Food allergen testing

Reveal® for Total Milk Allergen screens for milk residue at 5 parts per million

(ppm) in liquid products (e.g., juices and sorbet), clean-in-place rinses, and on environmental surfaces. Neogen also offers the Reveal 3-D line of food allergen tests – including for casein, soya and egg – which provides greater reliability with screening than ever before. The Reveal and Reveal 3-D rapid tests are especially useful in allowing multipurpose production lines to be tested quickly and reliably following the sanitation process, and provide results in as little as 5 minutes.

Sanitation monitoring

Neogen's new AccuPoint® 2 ATP Sanitation Monitoring System puts the

speed and convenience of ATP testing in a lightweight, rugged instrument that fits in the palm of your hand. AccuPoint's uniquely sturdy sampling devices consistently collect and detect potential contaminants from surfaces, liquids, and typically hard-to-access areas such as filler heads. AccuPoint's intuitive software provides exceptional traceability and easy data analysis.

Beta-lactam testing

BetaStar® US is a receptor-based lateral flow assay for the detection of beta-lactam residuals in milk in only 5 minutes. This easy-to-use format has wide acceptance in the international dairy market.
