

Reiser

For more than 50 years, Reiser has been a leading supplier of processing and packaging equipment to the cheese industry. During that time, the company has gained recognition for its high-quality equipment, innovative technology and outstanding service and support.

Vemag Cheese Block Former

Reiser and Vemag have designed a variety of Cheese Block Forming Systems for all types of applications and production requirements. This solution combines a Vemag Stuffer with a Reiser-engineered Cheese Horn – a cheese block forming and extruding attachment. The Vemag Cheese Block Former extrudes exact-weight cheese blocks with consistent dimensions and clean, uniform edges. This innovative solution eliminates waste by repurposing cheese trim, ends, scraps and other pieces to produce cheese blocks. A common application for this system is the production of cheddar cheese blocks for retail.

At the heart of the system lies the Vemag Stuffer. The Vemag features a powerful, positive displacement double-screw pump that provides the highest

levels of portioning accuracy while transporting the product extremely gently. The Vemag is available in various models and hopper capacities to meet any production requirement.

The Cheese Horn is an attachment to the Vemag. The Cheese Horn extrudes a shaped cheese block with consistent thickness and width. The Horn is equipped with a cutoff device to control the length of the product and ensure exact-weight portions with clean, even edges. Changeover from one shape to another is easily achieved by simply swapping out the Cheese Horn's die insert. The cheese block can be virtually any shape – square, rectangular, circular and even wedge-shaped.

Supervac Vacuum Chamber Cheese Packaging

Supervac automatic belt vacuum chamber packaging machines feature a double biactive high-pressure sealing system to produce the best package seals in the industry. Heat and pressure are applied from above and below the packaging

material to produce not just one seal, but two superior seals. A Supervac can easily handle all types of bags and packaging materials, including foil packaging. The sealing system virtually eliminates leakers, rework and returns.
