

# Thermo Scientific

Thermo Scientific product inspection solutions help our customers protect their brands by ensuring the quality and safety of their products. For more than 50 years, we've earned a reputation for delivering reliable solutions through our application knowledge, equipment performance and unmatched customer care.

## Thermo Scientific X-ray Inspection Systems

Around the world, Thermo Scientific X-ray inspection systems provide complete protection from metal, glass, stone and other dense foreign objects. Our x-ray systems inspect packaged, bulk or piped product.

## Thermo Scientific Metal Detection Systems

For protection against metal contaminants, Thermo Scientific metal detection systems provide a high level of performance, ease of use and reliability--typically achieving up to 20% better sensitivity than competitive units. And to ensure you get the right system for your application, we offer hundreds of standard head styles plus custom apertures and systems.

## Thermo Scientific Checkweighers

To ensure the accuracy for your weighing applications, Thermo Scientific checkweighers combine the latest in weighing technology with a variety of weighframes that include general purpose to more demanding, high-rate and high-accuracy systems.

## Thermo Scientific $\epsilon$ scan™ In-line Analyzer

When you need to "see what's inside the pipe," Thermo Scientific  $\epsilon$  scan™ in-line analyzer measures fat, moisture and protein in pumped food products, ensuring product quality to customer's standards and saving on raw material costs, as well and saving time, money and energy.

## Customer Care

To keep your Thermo Scientific equipment running at its peak performance levels, we

provide a complete range of services, parts and repairs. Our experienced service technicians ensure that our Thermo Scientific products constantly perform to the most demanding customer requirements. We even stock parts in several locations worldwide to minimize customer downtime. In addition, we offer technical support via telephone and Internet to address basic questions and troubleshooting issues. Finally, our global team of factory-trained and certified technicians offers preventive maintenance, field service repair and comprehensive service contracts.

## Thermo Scientific Product Inspection Service

When you suspect a contamination incident, our product inspection and recovery facilities offer a confidential, dependable

way to have product thoroughly inspected for a variety of contaminants—including metal, glass, stone, bone and rubber. We can inspect virtually all types of container materials, including metalized film and foil. We can also detect missing or mis-packaged product using the most advanced, non-destructive techniques that maximize product recovery and minimize financial loss.
