

Fortress Technology

Be Part of the Next Evolution with the Interceptor Metal Detector

Come visit us at the CheeseExpo in Booth 1303 to see the impressive effectiveness of our Interceptor Metal Detector.

At a much lower cost of ownership than x-ray systems, this simultaneous multi-frequency technology provides dairy producers, a cost-effective alternative for their food safety programs.

The Interceptor, effectively processes the transmission and reception of multiple frequencies continuously over a broad spectrum, facilitating an improvement in detection capabilities of up to 100% with stainless steel. The Interceptor is ideal when inspecting traditionally difficult "wet" products.

Never Obsolete: Fortress Metal Detectors Are Always Supported

Fortress metal detectors have always been engineered with a Never Obsolete

Commitment. Our customers have peace of mind that a Fortress metal detector will always be supported with parts, software upgrades and a global service team for the life of the detector.

Customized Metal Detection

Fortress Technology is the only North American Metal Detection Manufacturer that, since its inception in 1996, custom manufactures their equipment to suit our customers' needs, application and specifications to ensure optimal metal detection, without an exorbitant price tag.

Simple Operation. Outstanding Reliability. Exceptional Performance.
