

## Unibloc Pump

At Unibloc pump, we are proud to live up to our reputation of providing exceptional craftsmanship and an uncompromising commitment to customer service. Since 1984, Unibloc has provided the food, dairy and more industries with precision-engineered sanitary pumps, strainers and valves to take on the toughest jobs. We are the premier designers of simple, easy-to clean in place (CIP) or clean out of place (COP) pumps that fight downtime, achieve a lower cost of operation and meet deadlines with confidence.

Originally designing and manufacturing various valves, such as butterfly and check valves to market before developing the positive displacement rotary lobe pump. We further expanded the Unibloc brand with integrated pump units. Our

design and engineer teams developed several industry first features and incorporated them as standard to the Unibloc Pump line. Features include fully machined stainless pump gearbox, machined pump housing ports, multiple seal options without pump modification.

We are dedicated to providing uncompromised customer service and customers know we'll work to solve any manufacturing challenge and engineer the best possible pump for their specific needs, across a wide variety of industries. Our high level of customer satisfaction is not just essential to us – it's the foundation of our company.

# FIGHTING THE DOWNTIME FIGHT

Our pumps fight downtime because it's the heart of any process, and that means it's important to you. We are problem solvers that design high-quality performance pumps that work for your sanitary needs. We start with our innovative products, like QuickStrip® technology, and customize from there. No matter the flow, pressure, volume or velocity you need to move, we are ready, willing and able to design a premium pump for you.
